

Solsquare partners with ResourceLab to introduce

affordable energy management at NamibRe

Solsquare partners with ResourceLab to introduce affordable energy management and leads a joint project, installing 15.6 kWp grid tied Solar Photovoltaic Electrical Generating System at NamibRe.

With 60 photovoltaic panels now capable of producing up to 15.6kWp, this initiative is expected to help NamibRe generate energy in the order of 29MWh/annum, enhancing NamibRe's operations by becoming more environmentally friendly through reduced CO2 emissions and by lowering the facilities of electricity cost.

Putting up solar panels, brings a significant milestone towards NamibRe's commitment to environmental stewardship and is one more step in the expansion of its **Go Green Initiative** program.

NamibRe commends Solsquare and ResourceLab for their progressive goals and delivery of a competitively-priced solar solution that helps NamibRe move forward with its commitment to sustainable operation.

###

About Solquare:

Founded in 2008, Solsquare Namibia is a leading solar power systems integrator and specializes in small and large scale solar solar water heating and photovoltaic systems.

About ResourceLab:

ResourceLab is a South African and Namibian based business using a highly qualified and experienced team, to provide market-leading water and energy resources management services.
